ABSTRACT

"Method for neuroblastoma diagnosis/prognosis"

<u>BIOMERIEUX S.A./Centre Léon Bérard</u>

5   The present invention relates to a method for neuroblastoma prognosis in a patient suffering from neuroblastoma, characterized in that it comprises the following steps:

   a. biological material is extracted from a biological sample taken from the patient,

   b. the biological material is brought into contact with at least one specific reagent chosen from the reagents specific for the target genes exhibiting a nucleic acid sequence having any one of SEQ ID Nos. 1 to 37, it being understood that, when the target gene exhibits a nucleic acid sequence having one of SEQ ID Nos. 11, 17 or 37, the biological material is brought into contact with at least two specific reagents chosen from the reagents specific for the target genes exhibiting a nucleic acid sequence having any one of SEQ ID Nos. 1 to 37,

   c. the expression of at least one of said target genes is determined, it being understood that, when the target gene exhibits a nucleic acid sequence having one of SEQ ID Nos.11, 17 or 37, the expression of at least two of said target genes is determined.
